

## Nixon Developer test

As part of developer recruitment we like to set a little test that shouldn't take you too long to complete, but, will let us see your development skills in action.

### *The task*

Build a 1 page website (the design for which can be found in this Dropbox folder: <https://www.dropbox.com/sh/yehcnc94rg0ywr1/LwfoKo1z4s>) and upload the results to a public GitHub repo and send a link to the repo to [webdev@nixondesign.com](mailto:webdev@nixondesign.com)

The site should:

- Be responsive up to the maximum width shown in the design.
- Toggle visibility of the “Feline policy” content when the link is clicked (default should be hidden).
- Have a responsive slideshow at the top containing the 960x400px images found in the “Images” folder.
- Submit the form using AJAX to the simple ajax.php script in the Dropbox folder dealing with both the success and error statuses by showing an alert to the user with the message in the form of: “{Name submitted}: success” or “{Name submitted}: failure”.
- Update the ajax.php file to set cookies for the name and email values that were submitted.

We'll leave it to you to decide on which frameworks or add-ons you require to complete the task, please comment in the code or add a .txt file to the source discussing any that you use.

The fonts used can be found here:

- <https://www.google.com/fonts#QuickUsePlace:quickUse/Family:Quicksand>
- <https://www.google.com/fonts#UsePlace:use/Collection:Comfortaa>

The other assets can be found in the Development folder.
